## **Colorado Time Systems Introduces new Ergonomic Dolphin Stopwatch**

Colorado Time Systems introduced the wireless Dolphin Stopwatch Timing system in 2007 at the American Swimming Coaches Association World Clinic. It has since been accepted as a timing option with USA Swimming, NCAA, Australian Swimming, and China Swimming Association.

“The Dolphin system has been met with tremendous market interest,” said Anita Sayed, President and CEO, Colorado Time Systems. “We are pleased to introduce the 2<sup>nd</sup> generation of the stopwatch design, which was developed with input from our partners and customers throughout the world.”

The new design features sleek detailing, such as a contoured hand grip, to ensure that the watch is easy for everyone to use, regardless of hand size. The new watches are fully backward compatible with the first generation watches, which allows customers to upgrade as needed.

Based in Loveland, Colorado, Colorado Time Systems has established a reputation for precision and innovation in swim timing equipment. Since 1972, premier aquatic facilities have chosen Colorado Time Systems for platinum quality timing, scoring, and display systems.
