## **Grosse Pointe South High School Opens New Natatorium with 12-Lane Competition Pool**

Grosse Pointe South High School in Grosse Pointe Farms, MI opened doors to its new natatorium in September 2008. The natatorium features a full in-deck 12-lane timing and scoring system by Colorado Time Systems, as well as a custom 23mm Full Color Video Display measuring 10' x 17'. Prior to the upgrade, the facility had a four-lane 20-yard pool that was virtually unusable.

With the current upgrade, the school can hold practices and meets at their own facility rather than traveling to a nearby pool. "Colorado Time Systems' staff offered us some guidelines and laid out different options for us. We put together a plan and selected the best equipment configuration for our project and budget. What we ended up with was more than we expected. CTS really worked with us to get a customized system for our pool within our approved budget," said Eric Gunderson, Boys Swim Coach.

The video display adds a tremendous amount to the facility; allowing 12 lanes of race times and splits in different colors to be displayed, along with swimmers' names and event-specific information. The display can also show video taken from underwater cameras during practices or meets, as well as a 40-second pump-up video played after the National Anthem at the start of every meet.

"The Colorado Timing and Display system has tremendously helped our school to offer the most state-of-the-art pool facility," says Brandon Slone, Grosse Pointe South's Assistant Principal and Athletic Director. "CTS has been more than accommodating with all of our requests and it is evident that they strive for excellence with all of their products. I would highly recommend CTS to any other Athletic Director across the country without hesitation."

Based in Loveland, Colorado, Colorado Time Systems has established a reputation for precision and innovation in swim timing equipment. Since 1972, premier aquatic facilities have chosen Colorado Time Systems for platinum quality timing, scoring, and display systems.
